Lorenz van Herwaarden

Staff Software Engineer at GitLab

Email	lorenz.van.herwaarden@gmail.com
LinkedIn	linkedin.com/in/lorenzvanherwaarden
GitLab	gitlab.com/lorenzvanherwaarden
Github	github.com/lorenzvanherwaarden
Personal website	lorenzvanherwaarden.com

SKILLS

Languages	JavaScript, TypeScript, Ruby, GraphQL, SQL
Frameworks	Vue.js, React.js, Web Components
AI-Augmented Development	LLM-assisted code generation, AI agents for code review & architecture planning, custom agent workflows large-scale migrations
Design Systems & Accessibility	Component library architecture, design tokens, color systems, WCAG compliance
Testing & Quality	Jest, Cypress, Playwright, RSpec, Core Web Vitals/performance auditing
Build & CI/CD	GitLab CI, Webpack, Vite, Rollup, Github Actions

PROFESSIONAL EXPERIENCE

GitLab, Remote

Staff Software Engineer – Vulnerability Management team — **November 2026 - Present**

- Tech Lead for the Vulnerability Management team.

Senior Frontend Engineer – Security Insights team — **January 2023 - October 2026**

- DRI for the new Security Dashboard – architected and built the frontend (with backend contributions) cross-functionally (Security Infrastructure, UX, backend, product). Doubled page views post-launch.
- Spearheaded the Auto-Resolve Vulnerability Management Policy across teams, automatically resolving 6M+ vulnerabilities per month for customers.
- Led REST → GraphQL migrations and unified components across Security Insights surfaces, reducing tech debt and improving data-fetching consistency.
- Maintainer of gitlab and gitlab-ui – drives Bootstrap Vue migration, code review, and frontend best practices across the monolith.

Qlik, Ghent

Tech Lead — **September 2022 - January 2023**

- Led cross-team development of the Automations History Redesign, deeply integrating with Qlik Cloud infrastructure to power a new Automations Monitoring experience.

Software Engineer II — **September 2021 - September 2022**

- Replaced Vue-based automations rendering with Canvas API for improved performance.
- Architected undo/redo support using JavaScript Proxy, enabling reliable history management.

Software Engineer I — **November 2020 - September 2021**

- Led frontend integration of Blendr.io into Qlik Cloud, migrating from monolith to micro-frontend architecture (Vue.js + SingleSPA) with a shared UI library.
- Established a dual-target release process supporting both Cloud and legacy deployments, and introduced Cypress browser testing for regression coverage.

Blendr.io (acquired by Qlik), Ghent

Frontend Engineer — **April 2020 - November 2020**

- Led a full-platform redesign – built a Vue.js design system and component library from scratch.
- Delivered a white-labeling solution with CSS custom properties, enabling 30+ SaaS customers to embed a personalized Blendr.io experience.

- Redesigned the core drag-and-drop block builder for automation workflows.
- Rebuilt the OAuth connection flow, streamlining third-party integrations.

Deloitte Digital, Brussels

Frontend Engineer **September 2018 - April 2020**

- Built a React Native mobile app (Appinest) enabling social housing tenants to report and track repairs.
- Tech Lead for lez.brussels – delivered a React.js site combining content, permit requests, and LEZ simulation tools for the Brussels region.
- Developed MyTax.brussels, a React.js property tax platform handling payments and property information for Brussels residents.

Moovle, Brussels

Co-founder & iOS Engineer **June 2017 - June 2018**

- Architected and built a native iOS app from scratch, contributed to Android development, and shipped to both App Store and Google Play. Owned product design and UI end-to-end.

Sharda University, Delhi

Machine Learning Intern **July 2017 - August 2017**

- Explored low-cost face clustering with CNNs and TensorFlow, optimizing for accuracy under constrained compute budgets.

Château de Peyrolles, France

Web Designer **July 2008, December 2016, July 2019**

- Sole developer and designer of chateaudepeyrolles.com – a holiday rental site maintained and evolved over a decade, progressively enhanced from static HTML to responsive design to a React.js SPA.

EDUCATION

Ghent University, Ghent

Master of Science in Computer Science Engineering **Graduation Year 2018**

Magna Cum Laude

- Thesis: Athlete monitoring through context-aware training schemes – applied machine learning to predict and adapt training intensity using physiological and contextual data.
- Relevant elective coursework: Software Architecture, Machine Learning, Big Data Science, Design of Multimedia Applications, Entrepreneurship.
- Runamic – Master's Design Project (team of 8). Built an Android running app with dynamic route generation that adapts in real-time based on heart rate and user interaction. Led UI design and contributed to Android implementation. Served as Product Owner, translating customer needs into development priorities.

Bachelor of Science in Engineering: Computer Science **Graduation Year 2016**

Cum Laude

Koninklijk Lyceum Antwerpen (KLA), Antwerp

Latin-Maths (7 hrs) **Graduation Year 2012**

Interests: Traveling, Cooking, DIY, Running
